

**IRO Certificate #4599**

**NOTICE OF INDEPENDENT REVIEW DECISION**

May 2, 2003

**Re: IRO Case # M2-02-0415**

Texas Worker's Compensation Commission:

\_\_\_ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to \_\_\_ for an independent review. \_\_\_ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, \_\_\_ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to \_\_\_ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the \_\_\_ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 64-year-old female who on \_\_\_ was walking and caught her foot and fell forward, landing on her knees and catching herself with her hands. She developed back pain, which has persisted despite conservative measures. She has a history of a 1995 lumbar laminectomy with disk removal at L5-S1 on the left side. That procedure apparently relieved her symptoms and she was able to return to work. Since her most recent injury she has continued to have back pain, with extension into her right lower extremity to her ankle. Straight leg raising is positive. The general features of recurrent disk rupture with possible nerve root compression exists.

Requested Service  
Repeat lumbar MRI

Decision

I disagree with the carrier's decision to deny the requested procedure.

Rationale

The patient has a new set of symptoms compatible with disk rupture and nerve root compression on the side opposite her previous surgical procedure. Conservative measures, including use of a TENS unit, have not been successful in dealing with her trouble. Straight leg raising is positive, and the general feature of recurrent disk herniation exist. An MRI is certainly indicated.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
